Applications with Public Comments								
Certification Method								
9004	CURRIES	Exterior Doors	Exterior Door Components	a			Recommend Approval	New
9004	Comment by Jaime Gascon						There are sidelites, transoms, frames, etc. that require certification based on testing to TAS202, which requires the assembly to be tested for air infiltration. The certification agency states that this testing is "not a part of nor included in the certification of the products. Therefore, indicate "not for use in the HVHZ".	
9004	Response by Daniel Powers from UL						File 1	
9004	Recommendation by Administrator			c	c	c	Certification Agency has submitted revised letter included with Installation Instructions. Letter clarifies language of water and air infiltration testing to indicate that tests were "performed as as required by the TAS testing methods". Language indicating "not a part of nor included in the certification of the products" has been removed. <u>Recommend Conditional Approval with condition of replacing Installation Instructions UL letter with new revised letter indicating that air and water infiltration is not excluded from certification.</u>

Florida Building Commission Product Approval Applications

September 15, 2008

11098	Comment by Jaime Gascon						<p>Relying only on certificate from Intertek specifying ASTM D 226 and TAS 104, we assume that the tests submitted to ITS are similar to those we have seen for this manufacturer's product. Testing we have seen indicate this product cannot meet TAS 104 elongation requirements. ASTM D 226 for Type I and/or Type II (this is an asphalt felt standard and it should be identified as such on the certification).</p> <p>Installation Instructions contain several contradictions to HVHZ requirements such as:</p> <ul style="list-style-type: none"> -Fasteners and Tin caps allowed for use. -Fastener spacing specified in the High Wind Areas. -Exposure limitation testing required as per new 2007 TAS 110 requirements. <p>Limitations should contain HVHZ limitation language not allowing to be hot mopped. (This language is in our NOA for this product)</p> <p>No adhesion testing has been listed or seen so it should also contain HVHZ limitation language not allowing to be used as a tile underlayment unless this product is specified in a Tile Underlayment System Approval. (This language is in our NOA for this product).</p>		
11098	Response by Mark A. Franciosi						<p>1 - In regard to the comment about the product not meeting TAS 104 elongation. Our product (Tri-Flex 30) meets TAS 104 including the elongation requirement. We have a similar product (Tri-Flex Extreme) that did not meet the elongation requirement, I am assuming the comments are related to the other product (Tri-Flex Extreme).</p> <p>2 - In regard to the comments about "fasteners and tin caps allowed for use". The comments are not clear, would like to understand the concerns or contradictions the commenter is referring to.</p> <p>3 - In regard to the comments about fastener spacing in high wind areas. Can we add that installation must be in compliance with HVHZ requirements provided the requirements of the HVHZ are not less than our minimum requirements for high wind areas. As I understand the requirement of HVHZ fastening pattern, is 12" between overlaps. We currently require 24", we can conform to the requirements of HVHZ (12" grid pattern). For overlaps the HVHZ requirement is 6", ours is 4", we would require 4" OC on side and end laps. (i.e. 12" between overlaps and 4" oc on side and end laps).</p>		
11098	Response by Mark A. Franciosi (Cont.)						<p>4 - In regard to exposure limitation required per TAS 110. We currently have not tested to TAS 110. Can we add that installation must be in compliance with HVHZ requirements. We realize the exposure limitation will be less than our published literature.</p> <p>5 - In regard to the hot mop limitation. This is a limitation of our product and can be added as a limitation. (The language is in our NOA)</p> <p>6 - In regard to being used as a tile underlayment. Our product can be used under mechanically attached tile, but not under tile that is secured with an adhesive. This could be added as a limitation of our product. (The language is in our NOA)</p>		
11098	Recommendation by Administrator					c	c	<p><u>Recommend Conditional Approval with conditions of: Fastener spacing and exposure shall be in accordance with HVHZ requirements. Product shall not be allowed to be hot mopped. When used as a tile underlayment, tile shall be mechanically attached, not under tile that is secured with an adhesive.</u></p>

Florida Building Commission Product Approval Applications

September 15, 2008

1766-R2	Comment by Jaime Gascon						This evaluation indicates that the system meets the water requirements of the HVHZ. Saddle and ADA flat sills for both in swing and outswing applications of this product have not been able to prove this performance in the industry; this would be the 1st. Also, the adjustable jambs comprised of metal-to-metal connection do not indicate any sealant. Performance of this frame to meet HVHZ requirements is suspect. Establish limits accordingly, or indicate not for use in HVHZ.	
1766-R2	Response by RickW@rwbldgconsultants.com						In response to the comments concerning water infiltration, we will revise the limitations on the drawing and in the evaluation report to indicate: 1. Inswing configurations and outswing configurations using sill #71 do not meet the water requirements of the HVHZ and shall only be installed in locations with an overhang meeting the 45 degree requirement. 2. Outswing configurations using sill #70 meet the water requirements of the HVHZ.	
1766-R2	Response by RickW@rwbldgconsultants.com						In response to the comments concerning weather-sealing of the interface joint between the base jamb item #41 and the closure jamb item #42: 1. For outswing configurations, sealing of this interface joint is not an issue as this joint is on the non-weather side of the weatherstrip. 2. With the addition of the limitation that inswing units shall only be installed in locations with an overhang meeting the 45 degree requirement, sealing of this interface joint is not an issue. 3. We will add clarification to the drawing that sealant between the face-flange of the base jamb item #41 and the substrate is required.	
1766-R2	Recommendation by Administrator					c c c	<u>Recommend Conditional Approval with conditions of: On limits of use indicate: Inswing configurations and outswing configurations using sill #71 do not meet the water requirements of the HVHZ and shall only be installed in locations with an overhang meeting the 45 degree requirement. Inswing configurations installed in locations not having an overhang meeting the 45 degree requirement shall have the metal to metal connection of items Nos. 41 and 42 weather-sealed. Sealant between the face-flange of the base jamb item #41 and the substrate is required.</u>	
10166	West Tampa Glass Company	Panel Walls	Curtain Walls			a	Recommend Approval	New
10166	Comment by Administrator						On Product 10166.3 the mullion reinforcement is not detailed.	
10166	Response by RickW@rwbldgconsultants.com						We concur with your comment regarding the steel mullion reinforcement shown as item 33 on sheet 3 of 8 in Florida drawing # FL-10166.3 and will add the item number to the BOM and give appropriate details.	
10166	Recommendation by Administrator.					c c c	<u>Recommend Conditional Approval with condition of: For product 10166.3 add on BOM the description and properties of item 33.</u>	New
10495	Automatic Stamping, LLC	Structural Components	Truss Plates			a	Recommend Approval - Deferred in the June 2008 meeting. Complied with conditions of: Provide a test report for ASTM E8 by an approved testing lab of the specimens tested, or change application method. Provide revised test report including the corrections discussed on comment and response.	New

Florida Building Commission Product Approval Applications

September 15, 2008

10495	Comment by SLewis@www2.alpeng.com						<p>I reviewed the submittal for 10495 again, as I had objected previously to this submittal including steel design values that are not in accordance with the TPI 1 standard referenced in the building code. The current submittal does not include any recommended design values (the letter report from the engineer says they are attached but they are not on the website), so there is no way this submittal can be properly evaluated. This should be remedied.</p> <p>From the prior comments from the submitter, it also appears that the intent was to NOT remove the design values for steel efficiency determined using the maximum cross-section properties (in conflict with the referenced TPI 1 standard which requires only use of the minimum cross section properties for design) so the attached design values would (even if attached) still presumably not meet the requirements of the FBC. This too should be reviewed.</p>	
10495	Response by James A. Rothman, P.E.						<p>The evaluation report for the re-submittal of Automatic Stamping (FL #10495) for Florida product approval includes a reference to PFS Test Report #08-34R1. This report was not included with the official re-submittal; however, the report was submitted earlier to your office in response to the first public comments on FL 10495.</p> <p>This is to assure the commission that the testing and data analysis were done according to ANSI/TPI 1-2002 as required by the Florida Building Code. The Automatic Stamping truss connector plates are suitable for use in the HVHZ so long as the trusses on which they are used are designed for HVHZ conditions.</p> <p>The test report which includes the design values can be made available at any time.</p>	
10495	Recommendation by Administrator				c	c	<p>Applicant complied with condition of deferral, by changing the application method. The new application does not include any load values and leaves the design to a delegated engineer. <u>Recommend Conditional Approval with condition of providing proper design tables of tension and shear loads.</u></p>	
10706	Best Rolling Doors, Inc	Exterior Doors	Roll-Up Exterior Door Assemblies		a		<p><u>Recommend Approval</u></p>	New
10706	Comment by Jaime Gascon						<p>Structural wind load test on door did not reach required recovery of FBC 1625.2. Also, door under load will allow internal pressurization of the structure with the bottom slat design detailed on the drawings. See deflections at design load in the test. Indicate not for use in the HVHZ.</p>	
10706	Recommendation by Administrator				d	d	<p>There were no answers from applicant on public comments. <u>Recommend Deferral with condition of addressing bottom slat design detailed on drawings with the deflection indicated on test report.</u></p>	
Evaluation by Test Report								
7997-R1	Advanced Coatings Systems, Inc.	Roofing	Cements-Adhesives-Coatings		a		<p><u>Recommend Approval</u></p>	Revision
7997-R1	Comment by Jaime Gascon						<p>The adhesion testing done on the cap sheet should be specific as to type of cap sheet (Asphalt/Fiberglass or SBS) and it should also specify the surfacing (smooth of granule). The commentary under "Other" should be modified to correlate with the language used in the test reports with regard to the approved surfacing; specifically Galvanized Metal and the Cap sheet as described in the test report.</p>	

Actions and Recommendations
 a = approval d = deferral
 c = conditional approval y = denial
 15

Florida Building Commission Product Approval Applications September 15, 2008

	Recommendation by Administrator			d	d	d	There was no response by applicant on public comments. <u>Recommend Deferral to clarify type of cap sheet and its surfacing. Correlate limits of use to the surfacing on cap sheet and galvanized metal.</u>	
10668	Madison Ind., Inc. of Georgia	Roofing	Metal Roofing	a	a	a	Recommend Approval	New
10668	Comment by Jaime Gascon						Product is not designed to meet FBC 2222.4.4 since evaluation sheet indicates a design of I/180. Indicate not for use in the HVHZ.	
10668	Response by Frank Terry						The L/180 was an oversight, the test data shows that our product meets the L/240 requirement.	
10668	Comment by Administrator						The intended use of the product is as a canopy. Section 1613.1.6 allows a deflection of I/180 for canopies. The test report complies with the I/240 on the public comment. The I/180 was a note on the limits of use.	
10969	Creton AG	Roofing	Roofing Tiles	a			<u>Recommend Approval</u>	New
10969	Comment by Jaime Gascon						Who is designated to monitor the code required quarterly physical properties testing? This should be indicated in the "other" limitations field on the BCIS.	
10969	Response by Jesus Gonzalez						The required quarterly tests will be conducted by IBA Consultants and will be submitted to Keystone (Quality Assurance Inspection Company). Please, if you need any further information or document, feel free to contact me.	
10969	Recommendation by Administrator			c	c	c	<u>Recommend Conditional Approval with condition of: Approved testing laboratory to submit quarterly test reports to QA Agency.</u>	

Actions and Recommendations
 a = approval d = deferral
 c = conditional approval y = denial
